If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Response to Amendment

This Office Action is responsive to Applicant's arguments and request for continued examination of application 10/098,586 (03/14/02) filed on 05/12/08.

Status of the Claims

Claims 1 and 18 are currently amended. Claims 2-7 and 19-23 are original. Claims 8-17 and 24-26 are cancelled. Thus, claims 1-7 and 18-23 are currently pending.

Allowable Subject Matter

Claims 1-7 and 18-23 are allowed.

The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Ericksen, US Pub. No. 2002/0123960. Although Ericksen is similar to the instant application in some respects, there are clear patentable distinctions.

Ericksen teaches systems, methods and computer program products for offering loans having customized loan terms. Parameters about the loan (e.g., amount, term and type of loan) and account attributes (e.g., customer's credit score, debt burden, collateral) are taken into account. The expected probability of default by the customer is calculated and the loan terms that will deliver a minimum return on equity are calculated. The loan terms are offered to the customers.

.As applicant suggests in the remarks filed (05/12/08), the instant application is distinct from Ericksen in a few ways:

Art Unit: 3693

By contrast, Ericksen describes a system for offering customized consumer loans. The offered terms are customized for a particular applicant based on information gathered in a credit application, and "historical and/or projected statistics for similarly situated [other] customers." *See Ericksen Abstract, paragraph [0049]*. Ericksen computes the loan parameters that are expected to give an acceptable rate of return. *See Ericksen paragraph [0056]*. The result of Ericksen's calculation is a set of terms to be offered to a customer. *See Ericksen Figures 4-6*.

There is accordingly a fundamental difference between Applicants' claimed invention and the system of Ericksen.

Applicants' system and method operate to adjust the parameters of a financial account that has a history -- that is, an existing account for which *account history information* is available.

Ericksen is entirely concerned with attempting to predict the result of offering a customer a new loan or credit account. Ericksen is completely silent about what happens after the loan is offered, and makes no provision for adjusting the loan parameters during the life of the account based on the ongoing history of that account. Ericksen's method does not consider the history of the particular account, because no history yet exists. *See for example Figures 4-6 of Ericksen, wherein a calculated price is offered to a customer as the last step in the illustrated processes.* (See Applicant's Remarks, pg. 9, 05/12/08)

Independent claim 1 is allowed because the best prior art of record, Ericksen, alone or in combination, fails to teach, suggest or otherwise make obvious all the limitations of a method for using a computerized decision engine to adjust parameter values of a financial account, the method comprising:

assigning to the financial account an account processing method that sets one or more parameter values of the financial account, the account processing method having an associated method override that modifies at least one of the one or more parameter values set by the account processing method;

providing to the computerized decision engine a set of decision criteria comprising a set of decision elements each having one or more threshold values associated therewith, the set of decision elements corresponding to account attributes of the financial account, wherein at least one of the account attributes relates to historical usage of the account;

Art Unit: 3693

providing to the computerized decision engine the corresponding account attributes of the financial account;

providing to the computerized decision engine account history information about the financial account;

obtaining from the computerized decision engine a result indicating whether to apply the associated method override to the financial account, wherein the computerized decision engine determines the result by applying the decision criteria to the account attributes and the account history information;

applying the associated method override to the financial account in response to a result indicating that the associated method override is to be applied, and

changing at least one parameter value of the financial account in response to applying the method override.

Independent claim 18 is allowable based on the same rationale as claim 1.

Dependent claims are allowable based on the same rationale as the claims from which they depend.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
